Understanding number bonds

Focus 1: To explore number in subsets

Focus 2: Understand the concept of 'whole' and 'parts'

Focus 3: To be able to find number bonds for 'sixteen'

Preparing for number bonds within 20

Focus 1: To explore number bonds within 10

Focus 2: To consolidate number bonds within 10

Focus 3: To explore place value within 20

Focus 4: To consolidate place value within 20

Number bonds within 20

Focus 1: To use known number bonds within 10 for finding number bonds within 20

Focus 2: To find out unknown number bonds

**Printable resources can be found at the
back of the pack.**

Guidance

Using the at home materials

This pack contains a series of tasks for you to experience with your child. Each session has been carefully designed to develop number sense and support understanding. Provide lots of opportunities to get children to use mathematical vocabulary and explain their reasoning and reveal their thinking.

We have purposefully selected these short tasks, which should last around 15 minutes, so that you can fit them around your daily lives.

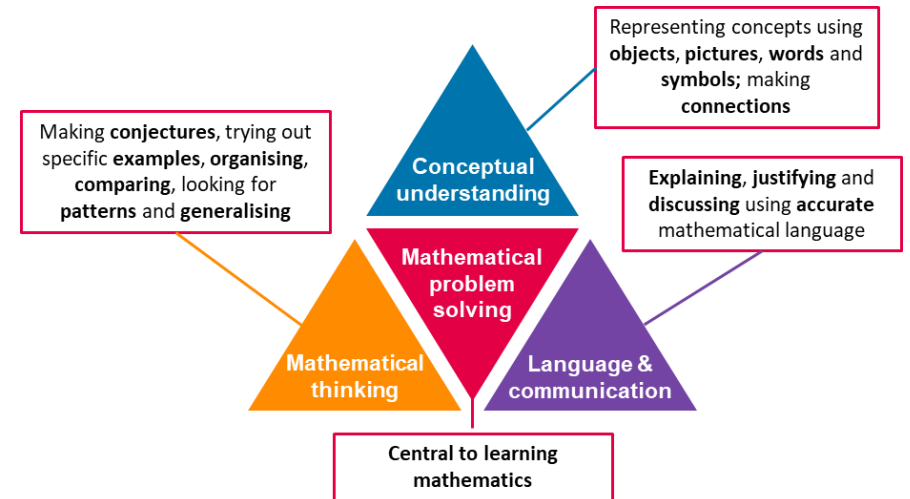

Each session begins with a short adult guided input, followed by a suggested task to complete and a suggested task to explore, which will take their learning deeper.

Success for all

At school we believe all pupils can achieve success in maths. We encourage pupils to have a belief that effort leads to success and that challenges are opportunities to learn.

Here are a few tips to encourage your children at home with maths:

- ✓Talk to your children about everyday maths
- ✓Play games with them
- ✓Value mistakes as learning opportunities
- ✓Recognise that there is more than one way to work things out
- ✓Praise children for effort over outcome
- ✓Avoid saying things like “I’m useless at maths”

What is 'Mastery'?

The 'mastery approach' to teaching mathematics is the underlying principle of Mathematics Mastery. Instead of learning mathematical procedures by rote, we want your child to build a deep understanding of concepts which will enable them to apply their learning in different situations. To achieve this we aim to develop pupils' **Conceptual Understanding, Mathematical Thinking and Language and Communication** (see diagram).

Number Bonds Within 20: Understanding number bonds

Focus 1: To explore number in subsets

About the maths

Being able to identify the number of objects in sets and subsets is key to developing an understanding of the concept of parts and whole in number bonds.

Key words

set
combine

What you'll need

Paper, pencils, a range of other objects for sorting that could go together e.g. knives and forks, plates and bowls, mugs and glasses, matchsticks, pebbles etc.

Getting started

Display a set of squares (or any other set of objects) that have been sorted into two subsets.

Ask your child to explain how the shapes (or objects) have been sorted. E.g.

Ask:

How many squares are there in the set? (12)

How many red squares are there in this subset? (7)

How many squares are not red? (5)

Task for your child

Provide your child with shapes that have been sorted into subsets.

Ask your child to identify how many there are in each subset.

Ask your child to identify how many there are altogether in the set.

Your child should be able to identify that:

- there are twelve triangles altogether.
- there are eight green triangles.
- there are four triangles that are not green.

Deepening understanding

Provide your child with shapes that have been sorted into more than two subsets.

Ask your child to identify how many there are in the set and how many there are in each subset.

Your child should be able to identify that:

- there are thirteen orange shapes altogether.
- there are seven orange squares.
- there are five orange circles.
- there is one orange triangle.

Number Bonds Within 20: Understanding number bonds

Focus 2: To understand the concept of 'whole' and 'parts'

About the maths

The concept of a 'whole' object and 'parts' of an object is key to understanding number bonds and is a concept that your child will apply when learning about different operations (addition, subtraction etc.,).

Key words

Whole
Part

What you'll need

Coloured shapes (printable version at the back of this pack)

Sorting hoops - you could use skipping ropes or string to create the hoops

Getting started

Create a set of blue shapes that have been sorted into two subsets.

Ask:

How many blue shapes are there in the set?

How many blue triangles are there in this subset?

How many blue circles are there in this subset?

Point out that the set represents the whole and the subsets represent the parts.

Task for your child

Provide your child with eight green triangles and seven yellow triangles (printable shapes at the back of this pack)

Ask your child to sort the triangles into parts.

Ask your child to identify how many there are in each part.

Ask your child to identify how many there are altogether in the whole.

Your child should be able to identify that:

- The whole is fifteen.
- The parts are eight and seven.

Deepening understanding

Provide your child with five triangles that can be sorted to illustrate all number bonds within 5. Model how to place the five triangles in different arrangements so that the parts are different for each example.

Say the whole and the parts for each example.

There are five triangles. There are zero squares. Five is the whole. Five and zero are the parts.

There are five triangles. Four are the same. One is different. Five is the whole. Four and one are the parts.

There are five triangles. There are two green triangles. There are three red triangles. Five is the whole. two and three are the parts.

Number Bonds Within 20: Understanding number bonds

Focus 3: To be able to find number bonds for 'sixteen'

About the maths

For your child to develop their understanding of number bonds, it is important that they explore number bonds using the same sixteen shapes for the tasks.

Key words

Set
Whole, part

What you'll need

Shapes, part-whole model (printable version of both at the back of this pack)

Getting started

Create a set of sixteen green shapes (or any objects). Sort the shapes into two subsets.

Ask:

How many green shapes are there in the set?

What is the whole?

How many green triangles are there in this sub set?

How many green circles are there in this subset?

What are the parts?

Task for your child

Provide your child with six shapes.

Ask your child to sort the shapes so that they are in two parts.

For each example, ask your child to identify the whole and the parts.

Sixteen is the whole.

Six and ten are the parts.

Ensure your child finds **all** number bonds for 16 (0 and 16, 1 and 15, 2 and 14, 3 and 13, 4 and 12, 5 and 11, 6 and 10, 7 and 9, 8 and 8).

Deepening understanding

Introduce the part-whole model (printable version at the back of this pack)

Display one representation of a number bond for sixteen and the part-whole model ask your child to identify the whole and record it in the model. Ask your child to identify the parts and record them in the model.

Create a representation for the same number bond for sixteen with the parts on different sides. Discuss what is the same and what is different. Through this discussion your child should recognise that the whole and the parts are the same but the shapes have been rearranged.

Number Bonds Within 20: Preparing for number bonds within 20

Focus 1: To explore number bonds within 10

About the maths

Your child need a secure understanding of number bonds within 10 before learning number bonds within 20.

Key words

Rod, colour, equal
Whole, part

What you'll need

Number rods e.g. Cuisenaire © (printable version at the back of this pack)
Countable objects e.g. buttons, counters
Part-whole model

Getting started

These tasks are designed to review number bonds within 10. If your child struggles with number bonds within 10, they may need to focus more on these number bonds within 10 before learning number bonds within 20.

Display 5 countable objects placed into sets to represent the different number bonds for five.

Ask your child to say how many there are in each set (five) and in each subset.

Place the countable objects from each set in a row.

Emphasise that the whole remains is the same (five) and the parts differ in each example. Say what the whole is and what the parts are for each example.

Repeat with number bonds for 4, 3, 2, 1.

Task for your child

Provide your child with the number rod (printable version at the back of this pack) that represents 7 and tell your child that the number rod represents the whole (seven).

Provide your child with two rods for each number 0-7

Ask your child to find the different pairs of rods that are equal to the whole, ask them to find the two parts that are equal to the whole.

Ensure your child says what the whole is and what the parts are.

E.g. Seven is the whole.
Three and four are the parts.

Seven is the whole.
Five and two are the parts.

Allow time for your child to find all possible number bonds for 7 and then 6.

Deepening understanding

Display an example of a number bond for eight represented using number rods and a part-whole model.

Ask your child to identify which is the whole and which are the parts.

Ask your child to record the whole and the parts on the model.

Ask your child to find all possibilities for 8, then 9 and 10.

If your child records the same numbers more than once, use it as an opportunity to explore how they represent the same number bond.

Number Bonds Within 20: Preparing for number bonds within 20

Focus 2: To consolidate number bonds within 10

About the maths

A secure understanding of number bonds within 10 will support your child with making connections between number bonds within 10 and within 20.

Key words

How many
Whole, part

What you'll need

Bead string or other resource with twenty items threaded onto string e.g. pasta tubes, buttons,
Part-whole model (printable version of both at the back of this pack)

Getting started

Display a bead string and a part-whole model.
Tell your child that the whole is nine and display nine beads.

Ask your child to discuss how a bead string could be used to help us to find the parts.

Share suggestions and model how to put the nine beads into two parts.

Record the parts on the part-whole model

Repeat with all number bonds for 8 and for 10.

Task for your child

Ask your child to find the different number bonds for seven using a bead string.

For each example, your child should use the same seven beads to reinforce that the whole is the same and that the parts change.

E.g.

Repeat for number all number bonds for 6.

Deepening understanding

Display a part-part-whole model with the whole and one of the parts recorded.

Discuss how the bead string could be used to help us to find out what the missing part is.

Prompts:

What is the whole? Ask your child to show the whole with the bead string.

What is one of the parts? Ask your child to move the same number of beads from the whole to represent one part.

How many are there in the other part? Ask your child to count the beads in the other part.

Repeat with any number bond within 10.

Number Bonds Within 20: Preparing for number bonds within 20

Focus 3: To explore place value within 20

About the maths

A secure understanding of place value with numbers within 20 will support your child with making connections between number bonds within 10 and within 20.

Key words

Group, groups of
Exchange, regroup
ones

What you'll need

Dienes blocks (20 ones and two tens)
(printable versions are at the back of this pack)

Getting started

Provide your child with a tens Dienes (do not tell them that is it a ten).

Ask your child to place the ones Dienes alongside each other to find out how many ones Dienes are equal to a tens Dienes.

Ensure that your child recognises that ten ones are equal to one ten.

Tell your child that the longer cuboid is called a ten because it has the same value as ten ones, it is equal to one group of ten.

Tell your child that the smaller cube is called a one because it has the value of one.

Display 11 ones. Model how to regroup one ten ones for one ten and find out how many ones there are left.

Record it in the table.

11

Tens	ones
1	1

Task for your child

Provide your child with 20 ones and two tens.

Ask your child to explore grouping 12 ones into tens and exchanging groups of ten for a tens Dienes. Ask your child to record their answers in a table.

13

tens	ones
1	3

Repeat with numbers 10-20.

Deepening understanding

Remind your child that one ten Dienes is equal to ten one Dienes.

Display the table below and explain that they are going to explore numbers within 10.

Provide your child with nine ones cubes.

Ask your child to explore whether they can regroup ten ones for one ten and discuss why they can't (because there are not ten ones)

Record the number of tens and the number of ones for nine in a table.

9

tens	ones
0	9

Repeat with all numbers 0-10.

Number Bonds Within 20: Preparing for number bonds within 20

Focus 4: To consolidate place value within 20

About the maths

A secure understanding of place value with numbers within 20 will support your child with making connections between number bonds within 10 and within 20.

Key words

Group, groups of
Exchange, regroup
Tens, ones

What you'll need

Dienes blocks (20 ones and two tens)
(printable version at the back of this pack)
Bead string or other resource with twenty items threaded onto string

Getting started

These tasks should be repeated for each pair of numbers (1 and 11, 2 and 12, 3 and 13, 4 and 14, 5 and 15, 6 and 16, 7 and 17, 8 and 18, 9 and 19, 10 and 20)

This example is for 1 and 11.

Provide your child with a bead string.

Tell your child that each bead represents one.

Explain and highlight how the beads on the string have been arranged into groups.

Ask your child to find out how many beads there are in one group.

Ensure that your child know the bead string has been grouped into tens.

Ask your child to show you one bead, ten beads and 11 beads.

Discuss how they know they have the correct number of beads.

Task for your child

Provide your child with partially completed place value charts and ask your child to find out the missing number.

tens	ones
0	1

Tens	ones
1	1

Ask your child to explore the numbers represented on the place value chart and discuss how they are the same and how they are different.

Ask your child to represent the numbers using a bead string and discuss how they are the same and how they are different.

Through this discussion your child should recognise that 11 has one more ten than 1.

Deepening understanding

Ask your child to represent one using Dienes blocks.

Ask your child to represent 11 using Dienes blocks.

Allow your child to count out 11 cubes and regroup ten ones for one ten if necessary to ensure your child understand that the value of one ten and one one is equal to eleven ones.

Discuss the similarities and differences between the two numbers.

Ensure that your child recognise that 11 is ten greater than one.
Both numbers have one one.
Eleven has one ten and one doesn't have any tens.

Number Bonds Within 20: Number bonds within 20

Focus 1: To be able to use known number bonds within 10 for finding number bonds within 20

About the maths

Links between knowledge of place value within 20, known number bonds within 10 and number bonds within 20 should be made clear to your child to enable them to find efficient methods for finding number bonds within 20.

Key words

Dienes, tens, ones
Bead string
Whole, part

What you'll need

Dienes
Bead string or other resource with twenty items threaded onto string
Part-whole model

Getting started

These tasks are designed to be explored by your child with the following pairs of number bonds (1 and 11, 2 and 12, 3 and 13, 4 and 14, 5 and 15, 6 and 16, 7 and 17, 8 and 18, 9 and 19).

The example for this guide focuses on number bonds for 15.

Display the number 5 and the number 15 and ask your child to record the number of tens and the number of ones on a place value chart for each number.

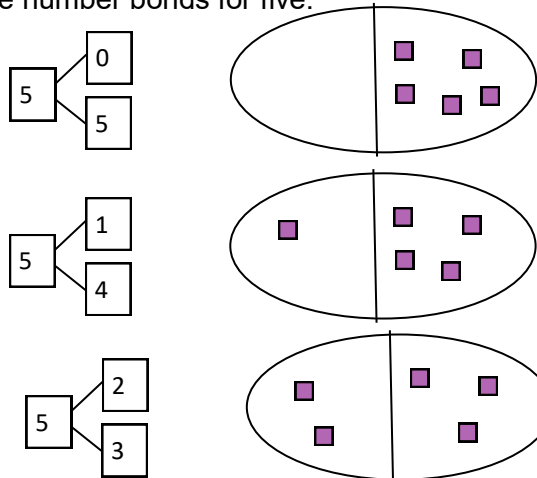

Explore what is similar and what is different and ensure that your child recognise that 15 is ten greater than 5.

Create a representation of a number bonds for 5.

Discuss and explore how we can use our known number bonds for 5 and the knowledge that 15 is ten greater than 5 to find number bonds for 15.

Task for your child

Ask your child to create all representations for the number bonds for five.

Ask your child to use the known number bonds and knowledge of place value to find some number bonds for 15 by adding ten to one of the parts.

For each example, make sure your child uses the same Dienes.

Deepening understanding

Display an example of a number bond for five and two number bonds for 15 with the whole and one of the parts completed. Make sure the part shown is a part for a number bond for five.

Ask your child to identify what is known (the whole and one of the parts) and what is unknown (one of the parts).

Ask your child to refer to their known number bonds for five and identify what the other part would be if five is the whole.

Number Bonds Within 20: Number bonds within 20

Focus 1: To be able to use known number bonds within 10 for finding number bonds within 20

...continued

Getting started

Five is the whole. One and four are the parts.

Fifteen is ten greater than five.

If we make one of the parts ten greater then the whole will be fifteen.

When exploring the number bonds, use the same Dienes to show that the whole remains the same.

For each number bond make links between the number bond for 5 and that 15 is ten greater than 5.

Task for your child

E.g.

Five is the whole. Zero and five are the parts.

Fifteen is ten greater than five. If I add ten to one of the parts, the whole will be fifteen.

Ensure your child finds all number bonds they can using known number bonds for five and place value.

Deepening understanding

Ask your child to refer to their knowledge of place value and knowledge of number bonds for five and identify what the other part would be if fifteen is the whole.

Ask your child to refer to their knowledge of place value and knowledge of number bonds for five and identify what the other part would be if fifteen is the whole.

Continue to make links between number bonds within 10 and number bonds within 20.

Number Bonds Within 20: Number bonds within 20

Focus 2: To be able to find out unknown number bonds

About the maths

Your child's understanding of number bonds will develop through exploring number bonds in a variety of ways. References should be made to the 'whole' and the 'parts' throughout these tasks.

Key words

How many
Whole, part

What you'll need

Bead string or other resource with twenty items threaded onto string e.g. pasta tubes, buttons.

Part-whole model

Getting started

These tasks are designed to be explored by your child for each number 11-20.

The example for this guide focuses on number bonds for 15.

Display a bead string and a part-part-whole model.

Tell your child that the whole is fifteen and display eight beads.

Ask your child to discuss how a bead string could be used to help us find the parts.

Share suggestions and model how to put the eight beads into two parts.

Record the parts on the part-part-whole model

Task for your child

Ask your child to find the different number bonds for fifteen using a bead string.

For each example, your child should use the same fifteen beads to reinforce that the whole is the same and that the parts change.

For each example, your child should be encouraged to use a systematic approach to reinforce that, when one part decreases by one, the other part increases by one when the whole is the same.

E.g.

Deepening understanding

Display a part-whole model with the whole and one of the parts recorded.

Discuss how the bead string could be used to help us to find out what the missing part is.

Prompts:

What is the whole? Ask your child to represent the whole with the bead string.

What is one of the parts? Ask your child to move the same number of beads from the whole to represent one part.

How many are there in the other part? Ask your child to count the beads in the other part.

Number Bonds Within 20: Number bonds within 20

Focus 2: To be able to find out unknown number bonds

...continued

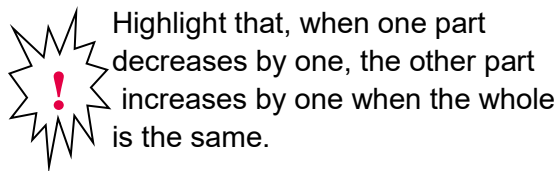

Getting started

Starting with the whole as one of the parts, display the part-part-whole model with the whole and one of the parts shown. Show representation of the whole and the parts using a bead string.

Ask your child to use the bead string to find out what the missing part is.

Move one bead from the part to show a different number bond. Ask your child to discuss how each part has changed.

Repeat with another example using a systematic approach. Each time highlighting that when one part decreases by one, the other part increases by one when the whole remains the same.

Task for your child

15	13	2	
15	12	3	
15	11	4	
15	10	5	
15	9	6	
15	8	7	

Ask your child to continue to ensure that they have got all of the number bonds for the whole.

Once your child has found all of the number bonds ask them to identify the ones that they could have found using place value and

Deepening understanding

Repeat with other examples for number bonds for 15.

When appropriate, make explicit links between the number bonds for 5 and place value.

E.g.

15	11	4		5 is the whole, 1 and 4 are the parts.
5	1	4		15 is ten greater than 5.
15	11	4		I can add ten to the part that is one. The whole is now 15. the parts are 11 and 4.

When appropriate, make explicit links between the approach used in the tasks for this session.

E.g.

15	9	6	
15	8		

Coloured 2-D shapes - ensure to cut out the squares and not the individual shapes.

20 Counters

Part-whole model

Cuisenaire Rods

Dienes
